

IN THE CLAIMS

Following is a complete set of claims. No changes have been made to the claims.

1 (original) 1. An apparatus comprising:
2 a decoder to decode an activation message, the activation message being sent from
3 an activator via a communication medium in response to a telephony call, the decoder
4 generating an activation command; and
5 a transmitter coupled to the decoder to transmit an information message, to a
6 receiver using a communication protocol, the transmitter being responsive to the
7 activation command.

Ad 1 (original) 2. The apparatus of claim 1 wherein the receiver is coupled to a
2 server, the server embedding the information message in network data to be sent over a
3 network.

Sc 31 1 (original) 3. The apparatus of claim 1 wherein the communication protocol uses
2 one of a multi-frequency tone, an ultra-red signal, a microwave signal, and an
3 electromagnetic signal.

1 (original) 4. The apparatus of claim 1 wherein the transmitting unit comprises a
2 modulator to modulate the information message according to a modulating scheme.

1 (original) 5. The apparatus of claim 4 wherein the modulating scheme is
2 compatible with a sound signal.

1 (original) 6. The apparatus of claim 5 wherein the modulating scheme uses a
2 pseudo random binary sound (PRBS).

1 (original) 7. The apparatus of claim 1 wherein the information message
2 includes a location identifier corresponding to location of the transmitter.

1 (original) 8. The apparatus of claim 7 wherein the location identifier includes
2 global positioning system (GPS) information.

1 (original) 9. The apparatus of claim 7 wherein the telephony call is made by a
2 person located in proximity of the location of the transmitter.

1 (original) 10. The apparatus of claim 7 wherein the telephony call is an
2 emergency call using an emergency call number.

A4
SGP
1 (original) 11. An apparatus comprising:
2 a decoder to decode an activation message, the activation message being sent from
3 an activator in response to a telephony call, the decoder generating an activation
4 command; and
5 a receiving unit coupled to the decoder to receive an information message
6 responsive to the activation command, the information message being sent from a
7 transmitter according to a communication protocol via a communication medium.

1 (original) 12. The apparatus of claim 11 wherein the receiving unit is coupled to
2 a server, the server embedding the information message in network data to be sent over a
3 network.

1 (original) 13. The apparatus of claim 12 wherein the communication protocol
2 uses one of a multi-frequency tone, an ultra-red signal, a microwave signal, and an
3 electromagnetic signal.

1 (original) 14. The apparatus of claim 13 wherein the receiving unit comprises a
2 demodulator to demodulate the information message according to a demodulating
3 scheme.

1 (original) 15. The apparatus of claim 14 wherein the demodulating scheme is
2 compatible with a sound signal.

1 (original) 16. The apparatus of claim 15 wherein the demodulating scheme uses a
2 pseudo random binary sound (PRBS).

1 (original) 17. The apparatus of claim 11 wherein the information message
2 includes a location identifier corresponding to location of the transmitting unit.

1 (original) 18. The apparatus of claim 17 wherein the location identifier includes
2 global positioning system (GPS) information.

1 (original) 19. The apparatus of claim 18 wherein the telephony call is made by a
2 person located in proximity of the transmitter.

1 (original) 20. The apparatus of claim 19 wherein the telephony call is an
2 emergency call using an emergency call number.

1 (original) 21. A network comprising a plurality of commonly coupled location
2 transmitters, each transmitter comprising a transmission unit to broadcast respective
3 location information.

1 (original) 22. The network of Claim 21, wherein the transmission unit of a
2 transmitter broadcasts the respective location information on a substantially periodic
3 basis.

1 (original) 23. The network of Claim 21, wherein the transmission unit of a
2 transmitter broadcasts the respective location information on a substantially continuous
3 basis.

1 (original) 24. The network of Claim 21, wherein the transmission unit of a
2 transmitter broadcasts the respective location information responsive to an activation
3 request.

1 (original) 25. The network of Claim 24, wherein at least one of the plurality of
2 transmitters comprises
3 a reception unit coupled to the transmission unit of the at least one of the plurality
4 of transmitters, the reception unit to receive the activation request and to notify the
5 transmission unit of such receipt.

Sub 3.1
1 (original) 26. The network of Claim 21, wherein each transmitter further
2 comprises a reception unit coupled to the transmission unit to receive an activation
3 request and to notify the transmission unit of such receipt; and wherein the reception units
4 of a set of the transmitters to receive the activation request at substantially the same time.

Ad
1 (original) 27. The network of Claim 26, wherein the set of the transmitters
2 comprises all of the plurality of transmitters in the network.

1 (original) 28. The network of Claim 26, wherein the set of the transmitters
2 comprises less than all of the plurality of transmitters in the network.

1 (original) 29. The network of Claim 21, wherein the transmitters are
2 geographically dispersed to form a distributed location broadcast system.

1 (original) 30. The network of Claim 21, wherein the transmission unit of a
2 transmitter broadcasts respective broadcast information in a format consistent with at
3 least one of an identification tag, an absolute location, and a relative location.

1 (original) 31. The network of Claim 21, further comprising:
2 a network component capable of coupling to a first transmitter of the plurality of
3 transmitters to receive and process the respective location information broadcast by the
4 first transmitter.

1 (original) 32. The network of Claim 24, further comprising:

2 a server coupled to the plurality of transmitters to selectively issue the activation
3 request to the plurality of transmitters.

1 (original) 33. The network of Claim 24, further comprising:

2 a network component capable of sensing at least one of the plurality of
3 transmitters, the network component comprising:

4 a sensor capable of at least intermittent coupling to a first transmitter of
5 the plurality of transmitters to receive the respective location broadcast by the first
6 transmitter, a location determination unit coupled to the sensor to process the
7 received respective location information, and a network interface to externally
8 issue the respective location information in accordance with a packet data format.

1 (original) 34. The network of Claim 33, further comprising:

2 a server coupled to the plurality of transmitters to selectively issue the activation
3 request to the plurality of transmitters responsive to a location event; and

4 a packet network interposing the network interface of the network component and
5 the server, the packet network to bear the packetized, respective location information to
6 said server.

1 (original) 35. The network of Claim 34, wherein the location event is generated
2 by the network component.

1 (original) 36. The network of Claim 35, wherein the location event comprises an
2 emergency call.

1 (original) 37. The network of Claim 34, further comprising an e-commerce
2 transaction processor coupled to the packet network, wherein the location event is
3 generated by the e-commerce transaction processor.

1 (original) 38. A method of locating a networkable component, comprising:
2 receiving a location information request, the location information request
3 requiring a location information;

4 generating at least one data packet comprising the location information; and
5 transmitting the at least one data packet in response to the location information
6 request.

1 (original) 39. The method of claim 38, wherein the data packet complies with
2 Internet Protocol.

54B
31
1 (original) 40. The method of claim 38, wherein the receiving of the location
2 information is performed by a receiver.

1 (original) 41. The method of claim 38, further comprising:
2 storing the location information in a store for storing location information.

AC
1 (original) 42. The method of claim 38, further comprising:
2 receiving the location information from a location information receiving device.

1 (original) 43. The method of claim 42, wherein the location information
2 receiving device is a Global Positioning System receiver.

1 (original) 44. The method of claim 38, wherein the location information is an
2 absolute reference to a location.

1 (original) 45. The method of claim 44, wherein the absolute reference comprises
2 geographic coordinates.

1 (original) 46. The method of claim 44, wherein the absolute reference contains a
2 location address.

1 (original) 47. The method of claim 44, wherein the absolute reference comprises
2 Global Positioning System data.

1 (original) 48. The method of claim 38, wherein the location information
2 comprises a relative reference to a location.

1 (original) 49. The method of claim 38, wherein the location information
2 comprises a predetermined code associated with a location.

1 (original) 50. The method of claim 38, wherein the location information request
2 is generated in response to an emergency telephony call.

1 (original) 51. The method of claim 38, wherein the location information request
2 originates from a networkable component.

1 (original) 52. The method of claim 51, wherein the networkable component is an
2 emergency server.

1 (original) 53. The method of claim 51, wherein the networkable component
2 comprises an association with a commercial transaction.

1 (original) 54. A networkable component comprising:
2 a receiver for receiving location information in response to a telephony call;
3 a processor for processing location information; and
4 a network interface for transmitting the location information over a network.

1 (original) 55. The networkable component of claim 54 wherein the location
2 information is one of a pre-determined location information and a global positioning
3 system (GPS) information.

1 (original) 56. The networkable component of claim 55 wherein the telephony call
2 is one of an emergency call, a commercial transaction call, and an intrusive call.

1 (original) 57. A networkable component comprising:
2 means for receiving location information in response to a telephony call;
3 means for processing location information; and
4 interface means for transmitting the location information

1 (original) 58. The networkable component of claim 57 wherein the location
2 information is one of a pre-determined location information and a global positioning
3 system (GPS) information.

1 (original) 59. The networkable component of claim 58 wherein the telephony call
2 is one of an emergency call, a commercial transaction call, and an intrusive call.

SCB
31
1 (original) 60. A networkable component comprising:
2 a location sensor to provide location information;
3 a determination unit coupled to the sensor, the determination unit to determine the
4 location information; and
5 a network interface coupled to the determination unit to selectively transmit the
6 location information over a network.

Ac
1 (original) 61. A method comprising:
2 decoding an activation message to generate an activation command, the activation
3 message being sent from an activator via a communication medium in response to a
4 telephony call; and
5 transmitting an information message responsive to the activation command, by a
6 transmitting unit, to a receiver using a communication protocol.

1 (original) 62. The method of claim 61 further comprising embedding the
2 information message in network data to be sent over a network.

1 (original) 63. The method of claim 61 wherein the communication protocol uses
2 one of a multi-frequency tone, an ultra-red signal, a microwave signal, and an
3 electromagnetic signal.

1 (original) 64. The method of claim 61 wherein transmitting comprises
2 modulating the information message according to a modulating scheme.

1 (original) 65. The method of claim 64 wherein the modulating scheme is
2 compatible with a sound signal.

1 (original) 66. The method of claim 64 wherein the modulating scheme uses a
2 pseudo random binary sound (PRBS).

1 (original) 67. The method of claim 61 wherein the information message includes
2 a location identifier corresponding to location of the transmitting unit.

1 (original) 68. The method of claim 67 wherein the location identifier includes
2 global positioning system (GPS) information.

1 (original) 69. The method of claim 61 wherein the telephony call is made by a
2 person located in proximity of the location of the transmitter.

1 (original) 70. The method of claim 69 wherein the telephony call is an
2 emergency call using an emergency call number.

1 (original) 71. A method comprising:
2 decoding an activation message to generate an activation command, the activation
3 message being sent from an activator in response to a telephone call; and
4 receiving an information message responsive to the activation command, the
5 information message being sent from a transmitter according to a communication
6 protocol.

1 (original) 72. The method of claim 71 further comprises embedding the
2 information message in network data to be sent over a network.

1 (original) 73. The method of claim 72 wherein the communication protocol uses
2 one of a multi-frequency tone, an ultra-red signal, a microwave signal, and an
3 electromagnetic signal.

1 (original) 74. The method of claim 73 wherein receiving comprises
2 demodulating the information message according to a demodulating scheme.

1 (original) 75. The method of claim 74 wherein the demodulating scheme is
2 compatible with a sound signal.

1 (original) 76. The method of claim 75 wherein the demodulating scheme uses a
2 pseudo random binary sound (PRBS).

1 (original) 77. The method of claim 71 wherein the information message includes
2 a location identifier corresponding to location of the transmitter.

1 (original) 78. The method of claim 77 wherein the location identifier includes
2 global positioning system (GPS) information.

1 (original) 79. The method of claim 78 wherein the telephony call is made by a
2 person located in proximity of the transmitter.

1 (original) 80. The method of claim 76 wherein the telephony call is an
2 emergency call using an emergency call number.

1 (original) 81. A computer program product comprising:
2 a machine useable medium having computer program code embedded therein, the
3 computer program product having:
4 computer readable program code for decoding an activation message to generate
5 an activation command, the activation message being sent from an activator via a
6 communication medium in response to a telephony call; and
7 computer readable program code for transmitting an information message,
8 responsive to the activation command by a transmitting unit, to a receiver using a
9 communication protocol.

1 (original) 82. The computer program product of claim 81 further comprises
2 computer readable program code for embedding the information message in network data
3 to be sent over a network.

543
31
1 (original) 83. The computer program product of claim 82 wherein the
2 communication protocol uses one of a multi-frequency tone, an ultra-red signal, a
3 microwave signal, and an electromagnetic signal.

Ac
1 (original) 84. The computer program product of claim 83 wherein the computer
2 readable program code for transmitting comprises computer readable program code for
3 modulating the information message according to a modulating scheme.

1 (original) 85. The computer program product of claim 84 wherein the
2 modulating scheme is compatible with a sound signal.

1 (original) 86. The computer program product of claim 85 wherein the
2 modulating scheme uses a pseudo random binary sound (PRBS).

1 (original) 87. The computer program product of claim 81 wherein the
2 information message includes a location identifier corresponding to location of the
3 transmitting unit.

1 (original) 88. The computer program product of claim 82 wherein the location
2 identifier includes global positioning system (GPS) information.

1 (original) 89. The computer program product of claim 88 wherein the telephony
2 call is made by a person located in proximity of the location of one of the decoder and the
3 transmitter.

1 (original) 90. The computer program product of claim 89 wherein the telephony
2 call is an emergency call using an emergency call number.

843
36

1 (original) 91. A computer program product comprising:
2 a machine useable medium having computer program code embedded therein, the
3 computer program product having:
4 computer readable program code for decoding an activation message to generate
5 an activation command, the activation message being sent from an activator in response
6 to a telephony call; and
7 computer readable program code for receiving an information message,
8 responsive to the activation command, the information message being sent from a
9 transmitter according to a communication protocol.

Ad

1 (original) 92. The computer program product of claim 91 further comprises
2 computer readable program code for embedding the information message in network data
3 to be sent over a network.

1 (original) 93. The computer program product of claim 92 wherein the
2 communication protocol uses one of a multi-frequency tone, an ultra-red signal, a
3 microwave signal, and an electromagnetic signal.

1 (original) 94. The computer program product of claim 93 wherein the computer
2 readable program code for receiving comprises demodulating the information message
3 according to a demodulating scheme.

1 (original) 95. The computer program product of claim 94 wherein the receiver is
2 a tone receiver compatible with the demodulating scheme.

1 (original) 96. The computer program product of claim 95 wherein the
2 demodulating scheme uses a pseudo random binary sound (PRBS).

1 (original) 97. The computer program product of claim 91 wherein the
2 information message includes a location identifier corresponding to location of the
3 transmitter.

1 (original) 98. The computer program product of claim 97 wherein the location
2 identifier includes global positioning system (GPS) information.

1 (original) 99. The computer program product of claim 98 wherein the telephony
2 call is made by a person located in proximity of the location of the transmitting unit.

1 (original) 100. The computer program product of claim 99 wherein the
2 telephony call is an emergency call using an emergency call number.

1 (original) 101. A system comprising:
2 an activator to transmit an activation message in response to a telephony call; and
3 a transmitter to communicate with the activator via a communication medium, the
4 transmitter comprising:

5 a decoder to decode the activation message, the decoder generating an
6 activation command, and
7 a transmitting unit coupled to the decoder to transmit an information
8 message, responsive to the activation command, to a receiver using a
9 communication protocol.

1 (original) 102. The system of claim 101 wherein the receiver is coupled to
2 a server, the server embedding the information message in network data to be sent over a
3 network.

1 (original) 103. The system of claim 102 wherein the communication
2 protocol uses one of a multi-frequency tone, an ultra-red signal, a microwave signal, and
3 an electromagnetic signal.

1 (original) 104. The system of claim 103 wherein the transmitting unit
2 comprises a modulator to modulate the information message according to a modulating
3 scheme.

1 (original) 105. The system of claim 104 wherein the modulating scheme is
2 compatible with a sound signal.

1 (original) 106. The system of claim 105 wherein the modulating scheme
2 uses a pseudo random binary sound (PRBS).

1 (original) 107. The system of claim 101 wherein the information message
2 includes a location identifier corresponding to location of the transmitter.

1 (original) 108. The system of claim 107 wherein the location identifier
2 includes global positioning system (GPS) information.

1 (original) 109. The system of claim 108 wherein the telephony call is made
2 by a person located in proximity of the location of one of the decoder and the transmitter.

1 (original) 110. The system of claim 109 wherein the telephony call is an
2 emergency call using an emergency call number.

1 (original) 111. A system comprising:
2 an activator to transmit an activation message in response to a telephony call; and
3 a receiver coupled to the server, the receiver comprising:
4 a decoder to decode the activation message, the decoder generating an
5 activation command, and
6 a receiving unit coupled to the decoder to receive an information message
7 responsive to the activation command, the information message being sent from a
8 transmitter according to a communication protocol via a communication medium.

1 (original) 112. The system of claim 111 further comprises a server coupled
2 to the receiver to embed the information message in network data to be sent over a
3 network.

1 (original) 113. The system of claim 112 wherein the communication
2 protocol uses one of a multi-frequency tone, an ultra-red signal, a microwave signal, and
3 an electromagnetic signal.

1 (original) 114. The system of claim 113 wherein the receiver comprises a
2 demodulator to demodulate the information message according to a demodulating
3 scheme.

1 (original) 115. The system of claim 114 wherein the demodulating scheme
2 is compatible with a sound signal.

1 (original) 116. The system of claim 115 wherein the demodulating scheme
2 uses a pseudo random binary sound (PRBS).

1 (original) 117. The system of claim 111 wherein the information message
2 includes a location identifier corresponding to location of the transmitter.

1 (original) 118. The system of claim 117 wherein the location identifier
2 includes global positioning system (GPS) information.

1 (original) 119. The system of claim 118 wherein the telephony call is made
2 by a person located in proximity of the location of the transmitter.

1 (original) 120. The system of claim 119 wherein the telephony call is an
2 emergency call using an emergency call number.
